

Design service for TITAN Aluminium Megashore System

ISCHEBECK supports projects right from the start and stands for maximum economy, maximum safety.

Structural calculations for the TITAN Aluminium Megashore System can be performed by our newly developed smart**TITAN** design software, which verifies falsework assemblies not covered by the typical calculations in accordance with German building legislation. ISCHEBECK can also provide BIM-compatible 3D models to help with your planning work. It is therefore possible to visualise alternative solutions, plan building operations realistically and avoid potential clashes.

- System flexibility fully exploited through analysis in accordance with German building legislation, also those not covered by the typical calculations
- Quickly adapted to requirements and optimum utilisation of the system
- BIM-compatible formwork planning
- Avoidance of clashes, visualisation of solutions by way of 3D formwork design
